

# Link profile to group

## Description

This function is used to link an existing Profile to a group

## Syntax

```
Public Function AddProfileToGroup  
(profileID As Integer, groupName As String, groupType As String, businessUnitName As String,  
changelogComment As String) As Boolean
```

## Parameters

ProfileId(Integer)

The ID of the profile

GroupName(String)

The name of the Group

GroupType(String)

The type of the Group

- AD
- Department
- Dynamic
- Static

BusinessUnitName(String)

The name of the Business Unit where the group is located. If an empty string is specified, the group will be found in Global

ChangelogComment (String)

*A comment that will be added to the changelog entry on the profile and the group*

## Return value

Returns a boolean value. True if succeeded, false if not.

## Example

### VBScript

```
Set oCMS = CreateObject("CapaInstaller.SDK")  
Wscript.echo oCMS.SetDatabaseSettings("ServerName", "CapaInstaller", False)  
Wscript.echo oCMS.SetDefaultManagementPoint("2")  
  
Wscript.echo oCMS.AddProfileToGroup(28, "Sales", "Department", "Skanderborg", "Added profile to bu-grp from SDK")  
Wscript.echo oCMS.AddProfileToGroup(14, "Dev", "Static", "", "Added profile to grp from SDK")
```
