

Get unit linked user

Description

Gets a computer's linked Users.

Syntax

```
GetUnitLinkedUser(Byval ComputerName as String) as ArrayList
```

Parameters

ComputerName (String)

The name of the computer

Return Value

The function returns an array of users. Each user (u) in the array is a joined line with the character defined with [Set splitter](#).

- u.Name
- u.Created
- u.LastExecuted
- u.Status
- u.Description
- u.GUID
- u.ID
- u.Type.Name

Example

VBScript

```
Set oCMS = CreateObject("CapaInstaller.SDK")
Set aUnit = CreateObject("System.Collections.ArrayList")
wscript.echo oCMS.SetDefaultManagementPoint("1")
Set aUnit= oCMS.GetUnitLinkedUser("Klient")
for each item in aUnit
    wscript.echo item
next
```
