

Change log

Introduction

The Change log plugin is a tool for viewing and handling change log created as a result of any change done to any item, module or asset in the CapalInstaller system. The change log shows all the changes implemented with success.

The Change log plugin contains the individual change log for every plugin. It is possible to archive the log information to ensure that the log only contains the data relevant for management.

Link	Description
Introduction	How to use the Changelog plugin
Simple search	Use simple search to quickly find Changelog records
Advanced search	Use advanced search to search only in Change description, comment, user name or dates
Enable Full-text search	Enable Full-text index search for better performance
